

IT 112 Web Systems and Technologies

Name: Sanin, Janin A.

Subject: IT 112-Web Systems and Technologies

Course, Year & Section: BSIT-2C

Prof: Mr. Guillermo V. Red, Jr.

In this week7 laboratory, I learned how to build a full-stack web app using Node.js, Express, MongoDB, and a Bootstrap frontend. One challenge I had was connecting backend to MongoDB Atlas and setting up the .env file correctly. I solved this by carefully following the steps, checking the connection string, and testing the API endpoints with Thunder Client. I also struggle at first in organizing the folder but eventually I also learned how to organize project with models, routes, and folders, which made the code easier to manage. An improvement I made was adding CRUD features on the frontend using fetch, so users could add, update, and delete data easily. This laboratory taught me how the frontend and backend work together and how to handle data properly. It really helped me gain confidence and improved my full-stack development skills.
